

Cuba - 4 Additional Provinces Global Youth Tobacco Survey (GYTS) **FACT SHEET**

The Cuba – 4 Additional Provinces GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Cuba – 4 Additional Provinces could include in a comprehensive tobacco control program.

The Cuba – 4 Additional Provinces GYTS was a school-based survey of students in form 1-4 conducted in 2004.

A two-stage cluster sample design was used to produce representative data for all of Cuba. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 95.8%, and the overall response rate was 95.8%. A total of 2,139 students participated in the Cuba – 4 Additional Provinces GYTS.

Prevalence

- 12.7% of students had ever smoked cigarettes (Boys = 13.6%, Girls = 11.4%)
- 7.4% currently use any tobacco product (Boys = 8.0%, Girls = 6.3%)
- 4.2% currently smoke cigarettes (Boys = 3.8%, Girls = 4.4%)
- 3.6% currently use other tobacco products (Boys = 4.7%, Girls = 2.2%)
- 6.4% of never smokers are likely to initiate smoking next year
